

T2-C

CUSTOM ENGINEERED APPLICATION CASE STUDY

Medical Device Company Increases Volume Input and Reduces Inefficiencies with TrojanLabel T2-C Print and Apply Solution

A large consumer medical device company shipping products to over 100 companies sought a solution for their practices that had become expensive and logistically challenging. The company uses a wide range of product package sizes varying from small to half-letter/A5. Additionally, their cartons require full-color printing of brand logos, product information, and product warnings in local languages specific to each customer's location.

The company introduced AstroNova's TrojanLabel T2-C to its production process and soon rapidly printed and auto-applied the required labels on the generic filled blank cartons. Integration of an automatic labeler with the T2-C allowed the company to create a print and apply solution that fully supported its packaging process from start to finish. The solution combined a uniquely designed peel edge for the T2-C with specialized firmware and electronics. Each label is presented and picked up by the applicator arm, then applied to the cartons. The built-in interface provides continuous operational parameters and status updates to the operator, simplifying changeover and troubleshooting. Ultimately, it improves throughput and eliminates costly downtime.

Implementing this print and apply solution has led to increased volume input, better consistency, and reduced inefficiencies.
