International Distributor Integrates World-Class TrojanLabel T3 to Create All-in-One Digital Print and Finish System

A worldwide company based in Europe, known for producing high-quality finishing machines for the label industry, needed to add a digital print module to their machines. Increasingly, customers requested a version that added a high-resolution digital color printer into an easy-to-use, all-in-one digital print and finish solution.

AstroNova's TrojanLabel T3 label printer module featuring 1600 x 1600 dpi print resolution offered an ideal integration option. The T3 solution features Sirius Memjet technology, built-in head cleaning routines, and water-based CMYK inks with exceptional print quality. With its large capacity ink tanks accommodating two liters per color, the print cost of the T3 printer is economical even during long runs.

The company's existing world-class finishing systems featured an electronic web guide, adjustable splice table, lamination, magnetic cylinder die-cutting modules, and remote desktop capabilities. With the integration of the TrojanLabel T3, the company finally had the all-in-one digital print and finish system its customers desired.
